

Energy policy statement

Johnston Sweepers Limited (JSL) recognises the impact of all its activities on natural resources and accepts its responsibility to reduce the use and consumption of energy as a moral and social challenge. This policy provides the frame work for setting and reviewing the company objectives and targets.

We are committed where possible to improve our energy performance efficiency. Our aim is to continually improve our energy efficiency through setting and reviewing energy objectives and targets using this policy as a frame work. The objectives and targets will be appropriate to the nature and scale of our activities and related energy use and consumption.

Our product is designed for maximum load carrying with optimum use of fuel and water without compromising performance. Using the latest technology in weld and fabrication (Laser cutting and robot welding) we aim to reduce raw material waste and enhance energy performance and consumption.

We support procurement of energy efficient equipment, services and new or modified facilities in support of business productivity. Energy efficiency is considered as part of any redesigning and business change activity.

Use of video conferencing and computer networking in the group local and international sites has priority over traveling between the sites.

The company's travel plan is designed to encourage the use of more sustainable modes of transport, and to reduce unnecessary travel.

To achieve our objectives and targets we shall comply with applicable local, national and international legal requirements in addition to the other requirements that we agree in relation to energy use, consumption and efficiency.

To fulfil our challenge we shall make available the information, resources and required training to our workforce.
